Irisi Report

April 30, 2020

0.1 INTRODUCTION

The Flower iris is used by R.A fisher in his research paper in 1936, to use for the multiple classification problem. Dataset is also available on Kaggele and UCI.

The major purpose of this project is to show some graphs i.e. data visulization like histograms and scatter plots. Where Histograms are similar to bar charts shows counts of data in bins and scatter plots show relationship between two data points, one can use third variable for the radius of circle of plot as well.

The total count of data is 150 rows, 50 rows for each class.

There are four features consists on these columns.

SepalLength SepalWidth PetalLength PetalWidth Species

The class variale is "Species". It has 3 number of classes.

Classes are below:

Iris-setosa Iris-versicolor Iris-virginica

0.2 Necessary Imports

```
[]: #imports

import os
import matplotlib.pyplot as plt
import pandas as pd
```

0.3 Read Dataset

```
#read dataset
data = pd.read_csv('drive/My Drive/iris.csv') data.head()
```

```
[7]: #data describe
      data.describe()

0.4 HISTOGRAM

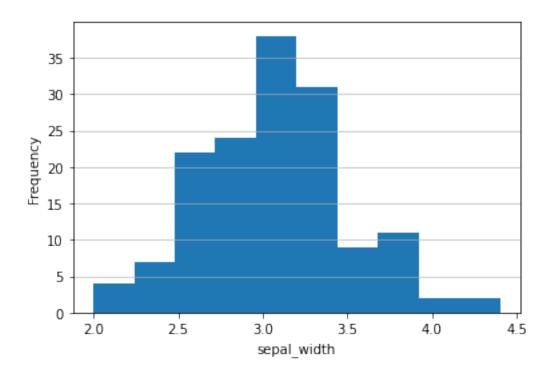

A histogram is a graphical representation that organizes a group of data points into user-specified ranges.

```
[12]: #histogram

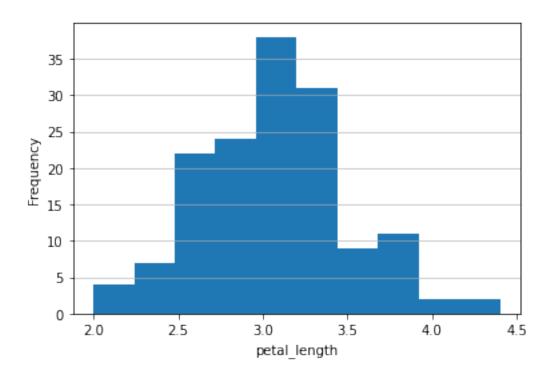

col = data.columns
commutes0 = pd.Series(data[col[0]])
commutes0.plot.hist()
plt.xlabel(col[0])
plt.grid(axis='y', alpha=0.75)
plt.savefig(col[0]+'.png')
plt.show()
```

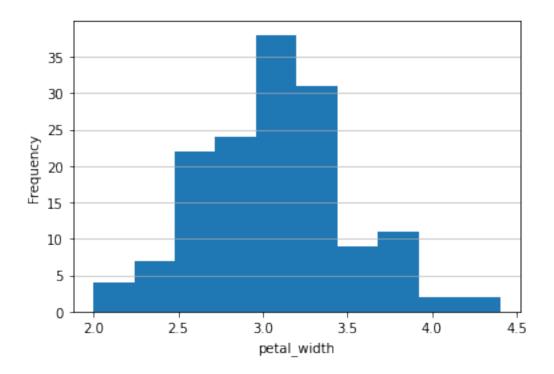

```
[13]: commutes1 = pd.Series(data[col[1]])
    commutes1.plot.hist()
    plt.xlabel(col[1])
    plt.grid(axis='y', alpha=0.75)
    plt.savefig(col[1]+'.png')
    plt.show()
```

```
[14]: commutes1 = pd.Series(data[col[1]])
    commutes1.plot.hist()
    plt.xlabel(col[2])
    plt.grid(axis='y', alpha=0.75)
    plt.savefig(col[2]+'.png')
    plt.show()
```

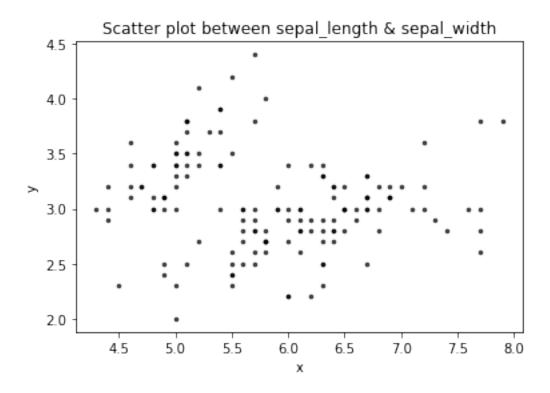

```
[15]: commutes1 = pd.Series(data[col[1]])
    commutes1.plot.hist()
    plt.xlabel(col[3])
    plt.grid(axis='y', alpha=0.75)
    plt.savefig(col[3]+'.png')
    plt.show()
```

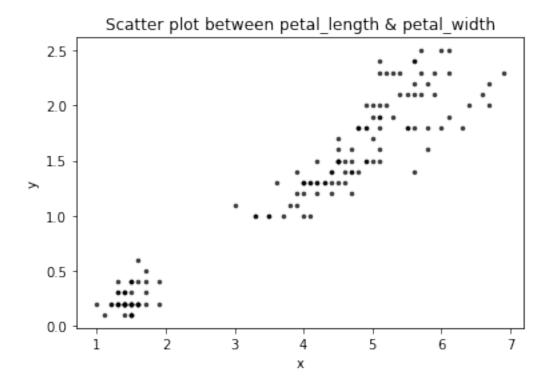

0.5 SCATTER PLOT

A graph of plotted points that show the relationship between two sets of data.

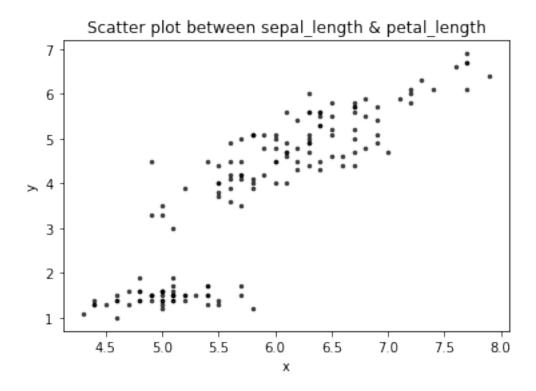

```
[16]: #scatter plot
colors = (0,0,0)
area = 3.14*2
plt.scatter(data[col[0]], data[col[1]], s=area, c=colors, alpha=0.7)
plt.title('Scatter plot between '+ col[0]+ ' & ' + col[1])
plt.xlabel('x')
plt.ylabel('y')
plt.savefig('Scatter plot between '+ col[0]+ ' ' + col[1]+'.png')
plt.show()
```

```
[17]: plt.scatter(data[col[2]], data[col[3]], s=area, c=colors, alpha=0.7)
    plt.title('Scatter plot between '+ col[2]+ ' & ' + col[3])
    plt.xlabel('x')
    plt.ylabel('y')
    plt.savefig('Scatter plot between '+ col[2]+ ' ' + col[3]+'.png')
    plt.show()
```

```
[18]: plt.scatter(data[col[0]], data[col[2]], s=area, c=colors, alpha=0.7)
    plt.title('Scatter plot between '+ col[0]+ ' & ' + col[2])
    plt.xlabel('x')
    plt.ylabel('y')
    plt.savefig('Scatter plot between '+ col[0]+ ' ' + col[2]+'.png')
    plt.show()
```

```
[19]: plt.scatter(data[col[1]], data[col[3]], s=area, c=colors, alpha=0.7)
    plt.title('Scatter plot between '+ col[1]+ ' &' + col[3] )
    plt.xlabel('x')
    plt.ylabel('y')
    plt.savefig('Scatter plot between '+ col[1]+ ' ' + col[3]+'.png')
    plt.show()
```
